Reflection:

1. What design principle did you find most useful?
   ● I think the most useful principle of design is repetition. I find it useful because it is a way to remain consistent. As an individual who uses a minimalist approach, it is very helpful to me towards designing my work in a continuous way.
2. What part of Canva was easiest/hardest to use?
   ● The easiest for me is the usage of elements and coloring as it gives me an ease of access to various shapes, designs, and background. The most nightmarish feature was the ruler and balancing of the elements thinking, "Is this straight?" or "Does the shape didn't align with each other?" so on and so forth.
3. What did you learn about visual communication?
   ● It gives me a foundation that design is very crucial to catch the eye. What is communication if the person is not even paying attention to you. Thus, for me it is imperative to show visual and creative approaches to captivate their attention. Overall for me, I learned a lot in this subject especially that I am going to utilize this to my studies and future works as a future educator.
