Title: AI Tool Prompt Engineering Report

AI Tool Overview

Name of AI Tool: Google Gemini

Purpose / Domain: (All-Rounder General Use AI) Versatile Multimodal Co-pilot Tool

Why I chose this: It uses ease of access. I can easily both create a prompt of ideas and it is able to create an image at the same time. Moreover, it has a feature to directly export prompts to Google Docs cleanly without breaking tables and other organization.

Output Comparison

ORIGINAL PROMPT: Create a mini story of literature for kids but also have an adult understanding where kids don't normally understand. Make it about a rivalry of a farm land owner and an industrial factory owner.

Result:

The Meadow and the Mill

In the valley of Oakhaven, two worlds shared a single fence line. On one side lived **Barnaby**, a man whose hands were always stained with soil and sun. He owned the Great Meadow, where cows grazed in slow motion and the grass whispered secrets to the wind.

On the other side lived **Sterling**, a man whose hands were always clean, though his heart was busy with gears. He owned the Silver Spire, a factory that hummed like a giant, tireless bee, turning cold metal into shiny toys and clicking gadgets.

The Rivalry

For the children of Oakhaven, the rivalry was a game of "pick a side."

- **Barnaby's world** was for hide-and-seek, tasting sweet clover, and watching the miracle of a seed becoming a pumpkin.
- **Sterling's world** was for the thrill of the new, the magic of buttons, and the excitement of things that moved faster than a galloping horse.

To a child, it was simply a choice between a **treehouse** and a **robot**.

The Hidden Layer (The Adult View)

While the kids saw a playground, the grown-ups saw a **clash of philosophies**.

Barnaby wasn't just growing pumpkins; he was preserving a **cyclical life**. He understood that you cannot rush the rain or negotiate with the winter. To him, Sterling wasn't just a toy-maker; he was a man trying to outrun time itself, turning the valley's quiet peace into a "resource" to be harvested.

Sterling, meanwhile, looked at Barnaby and saw **obsolescence**. He believed that back-breaking labor in the dirt was a cage. He saw his factory as a way to liberate people from the whims of nature. He didn't hate the meadow; he just thought it was inefficient. He saw progress as a straight line, while Barnaby saw it as a circle.

The Great Storm

One year, a drought parched the valley. Barnaby's grass turned to gold-dust, and his cows grew thin. Sterling offered to buy the meadow to build a second wing of the factory.

"The land is tired, Barnaby," Sterling said, adjusting his silk tie. "Let the machines do the work now. I can give your family a life where they never have to worry about the rain again."

Barnaby looked at his cracked soil. To the kids, it looked like Barnaby was losing the "game." But Barnaby shook his head. "Sterling, your machines create things, but my dirt creates *life*. You can't eat a gear when the cupboards are bare."

The Resolution

Eventually, the rain returned. The meadow turned green, and the factory continued to hum. The kids went back to playing—some in the dirt, some with the gadgets.

The children saw two neighbors who simply couldn't agree on which was better: a flower or a flashlight. They didn't see the heavy weight of **tradition** battling the relentless march of **innovation**. They didn't notice that while Sterling's toys were shiny, they eventually broke and were thrown away, while Barnaby's pumpkins always left behind a seed for next year.

Would you like me to expand on this story by adding a character who tries to bridge the gap between the farm and the factory?

AI-ASSISTED / FORMULATE PROMPT: Please expand on this story by adding characters who tries to bridge the gap between the farm and the factory in the story.

Result:

To bridge the gap between the whispering grass and the clicking gears, two new characters emerged: **Maya**, Barnaby's granddaughter, and **Leo**, Sterling's youngest apprentice.

The Inventors in the Middle

While the two men argued over fences, Maya and Leo met at the very edge of the property line. Maya brought a pocketsful of hardy sunflower seeds, and Leo brought a bag of discarded brass copper wire and tiny, broken motors.

To the other children, they were just playing in the dirt. But to an adult, they were performing an act of **reconciliation**.

The Invention: The "Solar-Bee"

Maya and Leo didn't see the Meadow and the Spire as enemies; they saw them as a puzzle. Together, they spent the summer building something the valley had never seen.

- **The Problem:** Barnaby's crops were struggling with new pests, and he was too tired to hand-weed the vast acreage.
- **The Problem:** Sterling's factory produced too much smoke, and he was running out of fuel to keep the gears turning.

The two children created the **Solar-Bee**. It was a small, mechanical scout built from Sterling's scrap metal, but it was powered by the very thing Barnaby worshipped: the sun.

The Hidden Layer (The Adult View)

When the two owners finally saw what the children had built, the realization hit them differently than it did the kids:

- **Barnaby** saw that **technology** wasn't an invader; it could be a steward. It didn't have to replace the soul of the land; it could protect it. He realized that holding onto the "old ways" out of pride was just as dangerous as ignoring them.
- **Sterling** saw that **nature** provided the ultimate blueprint. His factory was loud and hungry because it fought against the environment. Maya's integration of the sun taught him about **sustainability**—the idea that progress shouldn't be a "straight line" that ends in a scrap heap, but a system that feeds itself.

"You see, Grandfather," Maya said, "The Meadow gives the Bee a job, and the Spire gives the Bee its wings."

The New Valley

The rivalry didn't vanish overnight, but the fence changed. It was no longer a wall of "No Trespassing," but a trellis where Maya's vines climbed over Leo's copper pipes.

The kids in Oakhaven now play with toys that grow into trees when you're done with them, and they eat fruit harvested by gentle machines that hum a song Barnaby once whistled.

Would you like me to create an image of Maya and Leo working together on their "Solar-Bee" at the edge of the farm and the factory?

Additional Prompt: Create an image of Maya and Leo working together on their "Solar-Bee" at the edge of the farm and the factory?

Result:

Analysis and Reflection

1. What differences did you observe between the outputs?
2. Which output was more useful or accurate?
3. Why? How did the improved prompt affect:
 - a. Clarity
 - b. Depth
 - c. Relevance
4. What specific changes in the prompt led to better results?
5. What did you learn about prompt engineering?

I first prompted the Google Gemini to, Create a mini story of literature for kids but also have an adult understanding (pertaining that adults are able to relate) where kids don't normally understand. I specifically asked to make it about a rivalry between a farm land owner and an industrial factory owner. I picked this prompt to create a literature made by AI and specifically iterated this approach the common disputes in divergent economic interests, contrasting lifestyles, and their structural changes brought by **industrialization**, something evident and inspired a bit from the movie, "The Lorax" My first prompt is quite bland, and very direct. It doesn't have much taste for a fully fledged story with strong plot and it doesn't follow a plot pyramid. I didn't include it to the prompt as I assumed it will automatically do a literature with that narrative plot structure.

Moreover, Google Gemini suggested another prompt, it said, *"Would you like me to expand on this story by adding a character who tries to bridge the gap between the farm and the factory?"* Then I prompted, *"Please expand on this story by adding characters who tries to bridge the gap between the farm and the factory in the story."* to expand the story. Which is more useful as it enhances the story and plot. Then lastly I added an additional prompt as a visualizer. The improved prompt enhances the story with more characters and depth. The plot became more consistent and cohesive, not just a direct conflict and it became more relevant and can possibly follow a narrative pyramid plot structure.

The specific change I witnessed is that the story became more cohesive and clear. However the story is still quite bland but it added a more adequate structure. Prompt engineering is the refinement of both the person or individual's critical thinking to process a more better prompt, it can also be paired with the AI's suggestions for enhancements. However I must point out that reliance on AI fully without better judgement from one's cognitive logical capabilities will surely affect the flow or structure of the prompts. Overall, don't just prompt blindly and do it more with clear thought and objectives.

Appendix

Gemini

Farm vs. Factory: A Tale

Create a mini story of literature for kids but also have an adult understanding where kids don't normally understand. Make it about a rivalry of a farm land owner and an industrial factory owner.

◆ The Meadow and the Mill

In the valley of Oakhaven, two worlds shared a single fence line. On one side lived **Barnaby**, a man whose hands were always stained with soil and sun. He owned the Great Meadow, where cows grazed in slow motion and the grass whispered secrets to the wind.

On the other side lived **Sterling**, a man whose hands were always clean, though his heart was busy with gears. He owned the Silver Spire, a factory that hummed like a giant, tireless bee, turning cold metal into shiny toys and clicking gadgets.

The Rivalry

For the children of Oakhaven, the rivalry was a game of "pick a side."

- **Barnaby's world** was for hide-and-seek, tasting sweet clover, and watching the miracle of a seed becoming a pumpkin.
- **Sterling's world** was for the thrill of the new, the magic of buttons, and the excitement of things that moved faster than a galloping horse.

To a child, it was simply a choice between a **treehouse** and a **robot**.

Farm vs. Factory: A Tale

The Hidden Layer (The Adult View)

While the kids saw a playground, the grown-ups saw a **clash of philosophies**.

Barnaby wasn't just growing pumpkins; he was preserving a **cyclical life**. He understood that you cannot rush the rain or negotiate with the winter. To him, Sterling wasn't just a toy-maker; he was a man trying to outrun time itself, turning the valley's quiet peace into a "resource" to be harvested.

Sterling, meanwhile, looked at Barnaby and saw **obsolescence**. He believed that back-breaking labor in the dirt was a cage. He saw his factory as a way to liberate people from the whims of nature. He didn't hate the meadow; he just thought it was inefficient. He saw progress as a straight line, while Barnaby saw it as a circle.

The Great Storm

One year, a drought parched the valley. Barnaby's grass turned to gold-dust, and his cows grew thin. Sterling offered to buy the meadow to build a second wing of the factory.

"The land is tired, Barnaby," Sterling said, adjusting his silk tie. "Let the machines do the work now. I can give your family a life where they never have to worry about the rain again."

Barnaby looked at his cracked soil. To the kids, it looked like Barnaby was losing the "game." But Barnaby shook his head. "Sterling, your machines create things, but my dirt creates *life*. You can't eat a gear when the cupboards are bare."

You can't look at gear without the landscape and the land.

The Resolution

Eventually, the rain returned. The meadow turned green, and the factory continued to hum. The kids went back to playing—some in the dirt, some with the gadgets.

The children saw two neighbors who simply couldn't agree on which was better: a flower or a flashlight. They didn't see the heavy weight of **tradition** battling the relentless march of **innovation**. They didn't notice that while Sterling's toys were shiny, they eventually broke and were thrown away, while Barnaby's pumpkins always left behind a seed for next year.

Would you like me to expand on this story by adding a character who tries to bridge the gap between the farm and the factory?

Please expand on this story by adding characters who tries to bridge the gap between the farm and the factory in the story.
